

SECURITY ALERT: 20 DEC 2016

CRASH TEST LOCATIONS: France EU, Texas USA.

The following emulator, known as “ACCUDUAL”, aka “ACARD”, aka “DSOURCING”, has a proven 100% failure rate (given enough running time and data usage) because of a wrong device configuration geometry that leads the host machinery to try writing to non-existing sectors, at some random point, and immediately crash. Customers are urgently alerted about this risky and faulty hardware.
